Kodi Build The list of necessary equipment, software downloads and then list of steps to put a working build on your device.

What is KODI?

Kodi is a free, open-source media player and entertainment hub that lets you play and stream a wide variety of digital media, including:

Movies

TV shows

Music

Photos

Live TV and radio (with proper setup)

Originally known as XBMC (Xbox Media Center), Kodi was first developed for the original Xbox but has since evolved into a versatile media platform that runs on nearly all major operating systems, including: Windows

macOS

Linux

Android

iOS (with some extra steps)

Raspberry Pi

Key Features: Customizable interface with skins and themes Add-ons and plug-ins: Thousands are available to expand its functionality, including weather, streaming services, and utilities

Supports many file formats: MP4, MKV, MP3, FLAC, etc.

Network streaming: Stream from local or network storage, or over the internet

PVR (Personal Video Recorder) support for live TV and DVR features

Important Note:

Kodi itself is legal, but some third-party add-ons can give access to pirated content, which may be illegal depending on your region. Always be cautious about what add-ons you install.

PLEASE USE A VPN FOR KODI BUILDS

What is a VPN?

A **VPN** (Virtual Private Network) is a service that helps protect your online privacy and security by creating a **private, encrypted connection** between your device and the internet.

Here's a breakdown of what that means:

Hold What does a VPN do?

1. Encrypts your internet traffic

– This means no one (like hackers, your internet service provider, or even the government) can see what you're doing online.

2. Masks your IP address

– It hides your real location by routing your traffic through a server in a different city or country. So websites see the VPN server's IP, not yours.

3. Bypasses censorship or geo-restrictions

– You can access content that might be blocked in your country (like certain Netflix libraries, websites, or apps).

4. Secures public Wi-Fi

– Using a VPN on public Wi-Fi (like in cafes or airports) helps protect you from people trying to snoop on your connection.

Example:

Without a VPN:You → Internet → Websites see your real IP + location

With a VPN:

You → Encrypted tunnel → VPN server → Internet → Websites see VPN's IP + not your real one

If you want, I can recommend some good VPNs based on what you need—streaming, security, gaming, etc. Want help with that?

Once you have a VPN Go to Kodi website and download on your machine.

https://kodi.tv/download/

With Xbox go to Microsoft Store

With Android Box Go to Google Play

Once you have KODI downloaded and installed you should

Go to Settings:

Scroll Down to System Settings

Go to Add Ons

Scroll Right and Down to Unknown Sources and hit enter then scroll left hit yes

Hit Back and scroll up to File Manager

Hit Enter Sroll Down to Add Source

Hit enter It will take you to this screen below where you will hit enter again

File manager			-		6:21 PM
	Add file source	Enter the paths or bro	wse for the media location	5.	
LogsProfile directory	<none></none>			Browse	
 Add source 				Add Remove	
	-	Enter a name	for this media source,		
2		OK	Cancel		
Root		3/3	1/3 80NY		Root
	Area P				

• In the URL field, enter the Diggz Xenon repository address

• Note: We recommend searching online for the most up-to-date repo URL. Just search:

"Diggz Xenon Build official source"

• Click OK and give it a name like "Xenon" or send note in Contact page so I have your email and I will send you address privately if you buy some things from blog page will go out of my way to help you not have to spending the kind of money you may be spending on you and if you have a family your families at home entertainment expenses.

Hit Okay if media source is complete and correct. Then hit okay again It should be right there as below

Hit back again to settings menu and click add on Add Ons

Scroll Down to Install from zip file and hit enter

KODI SET UP WIZARD SHOULD BE UP ON YOUR SCREEN

Scroll Down one and left to Chef Wizard

Click enter and scroll down to authorize debrid and trakt and hit enter

<pre></pre>	
Installed Build: Diggz AIO DEBRID v3.1	MAG
Build Menu Maintenance	
Authorize Debrid and Trakt	
View Build Changelog	

It will take you to this screen hit on step 1 install Supported add ons

It will take you to next menu and it is your choice to begin setting up some default features within the build.

After that you steps below after my cartoon family you can explore the interface and menus as you like.

Don't worry — if you accidentally exit or skip a step, you can always return to **Chef Wizard** from the Add-ons section later.

After last page hit back to the first menu

Click right on Set Up Wizard to Install Xenon Skin

Hit enter and scroll left to yes hit enter

After its Downloaded then hit on apply skin

Hit current skin first one and YOU ARE DONE!

PLEASE USE A VPN WHEN USING THIS APPLICATION
